

Skills

Languages: Python, C++, TypeScript, JavaScript, Java, C, SQL, Bash, PowerShell

Frameworks & Libraries: React, React Native, Next.js, Node.js, Express, Spring Boot

Databases: SQLite, MySQL, MongoDB, Convex, Tinybird

Tools & Platforms: Bun, Git, GitHub, Linux, Amazon Web Services, Postman, Axios

Education

University of Waterloo, *Honours Computer Science Co-op*

Sep 2024 - Apr 2029

Experience

Software Developer

May 2026 - Aug 2026

Traces

Etobicoke, ON

- Contributed to Traces, a developer platform for capturing, sharing, and continuing coding sessions across different coding agents and teams
- Built and maintained **data-ingestion adapters** for **14+** coding agents, including local session discovery, content parsing, and **schema normalization** across JSONL files, SQLite DBs, and cloud-backed session stores
- Built a **session-lineage pipeline** for **8+** agents to infer parent-subagent relationships from native session stores and preserve lineage across local indexing, API surfaces, remote sync, and **Convex** storage
- Developed **token usage tracking** for **8+** agents, extracting agent-specific usage into shared **TypeScript** schemas, with CLI persistence, remote sync, and storage in **Convex** and **Tinybird**
- Designed a **cross-platform path-resolution module** for macOS, Windows, and Linux, standardizing agent storage discovery across OS-specific filesystem conventions

System Support Officer

Sep 2025 - Dec 2025

Ministry of the Attorney General

Toronto, ON

- Supported IT systems for **450+** staff and developed **PowerShell** automation for post-patch server and virtual machine restart workflows.

Projects

Codexpert

Feb 2026

- Built an AI-powered coding agent independently with **Python** and **Gemini API** that dynamically reads, explains, modifies, and executes files based on user prompts
- Implemented an **agentic control loop** based on the **ReAct** pattern that allows the model to iteratively request actions, observe results, and determine next steps until tasks are completed

ThreadSpace

Dec 2025

- Independently built a full-stack mobile discussion forum with a **React Native** + **TypeScript** frontend and a **Java** + **Spring Boot** + **MySQL** backend, featuring **15+** **RESTful** API endpoints for threads, categories, comments, user profiles, as well as user registration and authentication
- Developed a layered **MVC** architecture separating client, controller, service, repository, and database layers to improve system maintainability
- Designed relational data models as **JPA entities**, managed database access through **JPA repositories**, and used **DTOs** to ensure secure data transfer between application layers

ProRead

Nov 2025

- Designed and implemented a full-stack e-book platform using the **MERN** stack, with a **React** + **TypeScript** frontend using **Axios** for API communication, and a **Node.js** + **Express** + **TypeScript** backend with a **MongoDB** database
- Implemented **20+** **RESTful** API endpoints supporting user registration and authentication, as well as CRUD operations on books, reviews, reading lists, and user profiles
- Designed scalable **AWS S3** book file upload workflows by generating **pre-signed URLs** on the backend to enable direct client-side uploads, reducing server load significantly
